

Paper Case for RaspberryPi B+

Cut

Fold inward

Notes

- > Score card firmly on fold lines before folding
- > For best results cut with fine pointed knife and metal ruler.
- > Superglue or similar is best for gluing the tabs.
- > Use the thickest card your printer will take. I used approx 300gsm
- > This is a 2mm gap between the Pi and the base of the case to allow for glue-dots or similar adhesive.
